In the normal course of business, the Group makes various commitments and incurs certain contingent liabilities that are not presented in the financial statements including several suits and claims which remain unsettled. Amounts in the interim condensed consolidated financial statements are presented to the nearest thousand pesos (₱000) unless otherwise stated.

Seasonality or Cyclicity of Interim Operations

Seasonality or cyclicity of interim operations is not applicable to the Group's type of business.

Changes in Accounting Policies and Disclosures

The accounting policies adopted are consistent with those of the previous financial year except for the following amendments and improvements to PFRS which are effective beginning on or after January 1, 2017. Changes in the accounting policies that did not have any significant impact on the financial position or performance of the Group follow:

- PFRS 12, *Clarification of the Scope of the Standard (Part of Annual Improvements to PFRSs2014-2016 Cycle)* (Amendments)
- PAS, *Statement of Cash Flows, Disclosures Initiative* (Amendments)

3. Fair Value Hierarchy

The Group has assets and liabilities that are measured at fair value on a recurring basis in the statement of financial position after initial recognition. Recurring fair value measurements are those that another PFRS requires or permits to be recognized in the statement of financial position at the end of each reporting period. These include financial assets and liabilities at FVPL, AFS investments and land and buildings measured at revalued amount.

The Group uses the following hierarchy for determining and disclosing the fair value of assets and liabilities by valuation technique. These levels are based in the inputs that are used to determine the fair value and can be summarized in:

Level 1: quoted (unadjusted) prices in active markets for identical assets or liabilities

Level 2: other techniques for which all inputs which have a significant effect on the recorded fair value are observable, either directly or indirectly

Level 3: techniques which use inputs which have a significant effect on the recorded fair value that are not based on observable market data.

The Group held the following assets and liabilities measured at fair value and at cost but for which fair values are disclosed and their corresponding level in fair value hierarchy:

*** Based on the fair values from appraisal reports which is different from their carrying amounts which are carried at cost (Note 10)

When fair values of listed equity and debt securities, as well as publicly traded derivatives at the reporting date are based on quoted market prices or binding dealer price quotations, without any deduction for transaction costs, the instruments are included within Level 1 of the hierarchy.

For all other financial instruments, fair value is determined using valuation techniques. Valuation techniques include net present value techniques, comparison to similar instruments for which market observable prices exist and other revaluation models.

Significant input used in determining fair values of financial instruments under Level 2 comprises of interpolated market rates of benchmark securities.

As of September 30, 2017 and December 31, 2016, there were no transfers between Level 1 and Level 2 fair value measurements, and no transfers into and out of Level 3 fair value measurements.

The following table shows a reconciliation of the beginning and closing amount of Level 3 financial assets and liabilities which are recorded at fair value:

The structured Variable Unit-Linked Notes can be decomposed into bond components and options components. The fair value of structured notes has been computed by counterparties using present value calculations and option pricing models, as applicable. The valuation requires management to make certain assumptions about the model inputs particularly the credit spread of the Issuer. The model also used certain market observable inputs including the counterparty's credit default swap (CDS), PHP interest rate swap (IRS) rates (for the Peso-denominated issuances) and ROP CDS rates (for the USD-denominated issuances).

Description of valuation techniques are as follows:

Structured Notes	Valuation Methods	Significant Unobservable Inputs	Significant Observable Inputs
Peso-denominated	DCF Method / Monte Carlo Simulation	Issuer's Funding rate / Issuer's CDS as proxy	PHP IRS
Dollar-denominated	DCF Method / Monte Carlo Simulation	Issuer's Funding rate / Issuer's CDS as proxy	ROP CDS / USD IRS

The sensitivity analysis of the fair market value of the structured notes as of December 31, 2016 is performed for the reasonable possible movement in the significant inputs with all other variables

held constant, showing the impact to profit and loss follows:

Sensitivity of the fair value measurement to changes in unobservable inputs:

		2016	
Structured Investments	Significant Unobservable Input	Range of Input	Sensitivity of the Input to Fair Value*
Peso-denominated	Bank CDS Levels	47.28 - 92.37 bps	50 bps increase/(decrease) in change inputs would result in a (decrease) / increase in the market value of the note by ₱70 million
Dollar-denominated	Bank CDS Levels	40.179 - 76.344 bps	50 bps increase/(decrease) in change inputs would result in a (decrease) / increase in the market value of the note by ₱40 million

* *The sensitivity analysis is performed only on the fixed income portion of the Note, thus are based on assumptions that if changed may cause the value to fall out of range*

Sensitivity of the fair value measurement to changes in observable inputs:

		2016	
Structured Investments	Significant Observable Input	Range of Input	Sensitivity of the Input to Fair Value*
Peso-denominated	PHP IRS (3Y)	180.25 - 355.00 bps	50 bps increase/(decrease) in change inputs would result in a (decrease) / increase in the market value of the note by ₱66 million
Dollar-denominated	ROP CDS (5Y)	126.15 - 193.33 bps	50 bps increase/(decrease) in change inputs would result in a (decrease) / increase in the market value of the note by ₱28 million

* *The sensitivity analysis is performed only on the fixed income portion of the Note, thus are based on assumptions that if changed may cause the value to fall out of range*

The fair values of warrants have been determined using price quotes received from a third-party broker without any pricing adjustments imputed by the Parent Company. The valuation model and inputs used in the valuation which were developed and determined by the third-party broker were not made available to the Parent Company. Under such instance, PFRS 13 no longer requires an entity to create quantitative information to comply with the related disclosure requirements.

Description of the valuation techniques and significant unobservable inputs used in the valuation of the Group and Parent Company's investment properties are as follow:

Valuation Techniques

Market Data Approach A process of comparing the subject property being appraised to similar comparable properties recently sold or being offered for sale.

Replacement Cost Approach It is an estimate of the investment required to duplicate the property in its present condition. It is reached by estimating the value of the building "as if new" and then deducting the depreciated cost. Fundamental to the Cost Approach is the estimate of the improvement's Reproduction Cost New.

Significant Unobservable Inputs

Price per square meter Ranges from ₱800 to ₱100,000

Reproduction Cost New The cost to create a virtual replica of the existing structure, employing the same design and similar building materials.

Size Size of lot in terms of area. Evaluate if the lot size of property or comparable conforms to the average cut of the lots in the area and estimate the impact of lot size differences on land value.

Shape Particular form or configuration of the lot. A highly irregular shape limits the usable area whereas an ideal lot configuration maximizes the usable area of the lot which is associated in designing an improvement which conforms with the highest and best use of the property.

Location Location of comparative properties whether on a main road, or secondary road. Road width could also be a consideration if data is available. As a rule, properties located along a main road are superior to properties located along a secondary road.

Time Element "An adjustment for market conditions is made if general property values have appreciated or depreciated since the transaction dates due to inflation or deflation or a change in investors' perceptions of the market over time". In which case, the current data is superior to historic data.

Discount Generally, asking prices in ads posted for sale are negotiable. Discount is the amount the seller or developer is willing to deduct from the posted selling price if the transaction will be in cash or equivalent.

Corner influence Bounded by two (2) roads.

4. Financial Risk Management

Executive Summary / Results for the nine month Period September 30, 2017

The bank's Capital Adequacy Ratio as of end of September 30, 2017 stands at 15.45% on a consolidated basis while the bank's Risk Weighted Assets (RWA) as of September 30, 2017 amounted to ₱588,434 million composed of ₱536,422 million (Credit Risk Weighted Assets), ₱7,611 million (Market Risk Weighted Assets) and, ₱44,401 million (Operational Risk Weighted Assets).

The Board of Directors have the ultimate responsibility for the risk appetite of Philippine National Bank and the monitoring of risks on a regular basis. Risk governance is undertaken by a structured hierarchy of committees (both at board level and at the executive / management level) each with specified accountabilities.

The continuous flow of information between the board and board-level committees and the corresponding management committees; allow for consistent evaluation of the risks inherent in the business, raise the alarms, if any, and manage the business effectively with strong adherence to process management guidelines and controls.

Members of the senior management team play a pivotal role in the day-to-day running of the bank. Executive officers are assigned to various management committees that provide the leadership and execution of the vision and policies approved by the bank's board of directors. The bank's business objectives are driven for most part by the day-to-day directions decided by these management committees with approvals and notation by the various board level committees.

The PNB Board Risk Oversight Committee (ROC) is mandated to set risk appetite, approve frameworks, policies and processes for managing risk, and accept risks beyond the approval discretion provided to management.

The risk management policy includes:

- a comprehensive risk management approach;
- a detailed structure of limits, guidelines and other parameters used to govern risk-taking;
- a clear delineation of lines of responsibilities for managing risk;
- an adequate system for measuring risk; and
- effective internal controls and a comprehensive monitoring & risk-reporting process

While the first line of defense in risk management lies primarily on the bank's risk taking units as well as the bank's support units, the Risk Management Group is primarily responsible for the monitoring of risk management functions to ensure that a robust risk-oriented organization is maintained. The Risk Management Group (RMG) is independent from the business lines and is organized in 7 divisions: Credit Risk Management Division, ICAAP & BASEL Implementation Division, Market Risk & ALM Division, Operational Risk Management Division, Information Security and Technology Risk Division, Trust Risk Division and Business Intelligence & Data Warehouse Division.

Each division monitors the implementation of the processes and procedures that support the policies for risk management applicable to the organization. These policies clearly define the kinds of risks to be managed, set forth the organizational structure and provide appropriate training necessary to manage and control risks. The policies also provide for the validation, audits & compliance testing, to measure the effectiveness and suitability of the risk management structure. RMG also functions as the Secretariat to the Risk Oversight Committee which meets monthly to discuss the immediate previous month's total risk profile according to the material risks defined by the bank in its ICAAP document. Further, each risk division engages with all levels of the organization among its business and support groups. This ensures that the risk management and monitoring is embedded at the moment of origination.

5. Segment Information

Business Segments

The Group's operating businesses are determined and managed separately according to the nature of services provided and the different markets served with each segment representing a strategic business unit. The Group's business segments follow:

Retail Banking - principally handling individual customer's deposits, and providing consumer type loans, credit card facilities and fund transfer facilities;

Corporate Banking - principally handling loans and other credit facilities and deposit accounts for corporate and institutional customers; and

Treasury - principally providing money market, trading and treasury services, as well as the management of the Group's funding operations by use of T-bills, government securities and placements and acceptances with other banks, through treasury and wholesale banking.

Other Segments - include Global Filipino Banking Group, Trust Banking Group, Domestic Subsidiaries, Insurance, Leasing, Remittances and other support services. Transactions between segments are conducted at estimated market rates on an arm's length basis. Interest is credited to or charged against business segments based on a pool rate which approximates the marginal cost of funds.

For management purposes, business segment report is done on a quarterly basis. Business segment information provided to the BOD and Senior Management Team (SMT) is based on the Regulatory Accounting Principles (RAP) submitted to the BSP in compliance with the reportorial requirements under the Financial Reporting Package (FRP) for banks, which differ from PFRS. Significant differences arose from the manner of provisioning for impairment and credit losses, measurement of investment properties and the fair value measurement of financial instruments. The report submitted to SMT represents only the results of operation for each of the reportable segment.

Segment assets are those operating assets that are employed by a segment in its operating activities and that either directly attributable to the segment or can be allocated to the segment on a reasonable basis.

Segment liabilities are those operating liabilities that result from the operating activities of a segment and that either are directly attributable to the segment or can be allocated to the segment on a reasonable basis.

The Group has no significant customer which contributes 10.00% or more of the consolidated revenue.

Business segment information of the Group follows:
